Seed&Early Stage: What is it?

The seed&early stage investments of PMV are always made in the form of a share participation, possibly combined with a convertible loan.

The round of financing will be optimally structured according to the financing needs and co-investors. The initial round of financing must allow a significant, value-increasing milestone to be achieved.

PMV's typical investment tickets in the first round of financing can be up to EUR 500,000. Multiples of this can be reserved for possible follow-up investments.

The duration of PMV's investment is limited in time. PMV strives for a positive return by creating added value from the sale of its block of shares. Here, PMV distinguishes itself from other lenders in the sense that it is a patient investor with an exit horizon that can run to 7 and in some cases even to 10 years.
